1 Some calculations

Here are some calculations that might help with fixing the integration in my MA paper, which are currently not done as well as they could be. Calculating the interpolating polynomial for any given set of points x_1, \dots, x_k :

$$\phi_k(x) = \prod_{m=1, m \neq k} \frac{x - x_m}{x_k - x_m}$$

2 Function determines the communication rituals.
